Windows Management

Windows Phone Management

AirWatch® by VMware® provides complete mobility management solutions for Windows Phone enterprise deployments. AirWatch supports Windows Phone 7+ (Mango), Windows Phone 8 (Apollo) and Windows Phone 8.1 (Blue).

Enrollment

The AirWatch enrollment process provides an intuitive experience for Windows Phone users through secure, web-based enrollment. End users are authenticated by entering their username and password. Upon enrollment, the device is automatically configured with profiles, apps and content.

Security

To secure Windows Phone devices, set advanced passcode requirements and configure restrictions such as disabling camera and screen capture to protect corporate information and maximize data loss prevention.

Profiles

With AirWatch, configure profiles for automatic or on-demand deployment. Profiles integrate with end users' Active Directory (AD) credentials to ensure each user has the proper access and restrictions. Enable profiles for native email clients, passcode policies, encryption settings, restrictions and credentials, including root and user certificates.

Apps

AirWatch enables enterprises to effectively manage apps on Windows Phone devices. Deploy and manage internal and public apps through AirWatch® App Catalog. Create whitelists and blacklists for private and public apps. Support AirWatch apps including AirWatch® Secure Content Locker™ and AirWatch® Browser.

Monitoring

Manage, secure and track Windows Phone devices in your enterprise from a single console. View detailed device data, including compliance, network status, certificates and more. Reduce the burden on IT and empower employees with the AirWatch self-service portal. From the portal, end users can view detailed device information and perform remote commands.

Management

AirWatch enables remote commands, including sending a message to an end user, locking a device or performing an enterprise or device wipe.
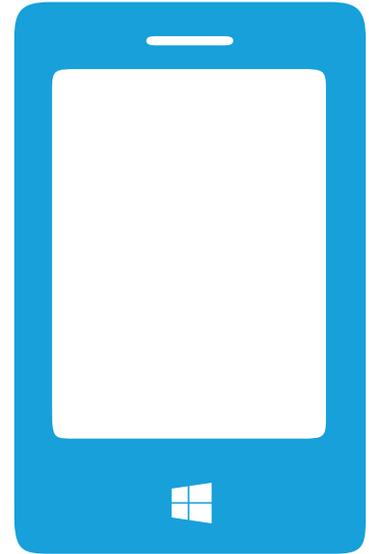

Windows Management

AirWatch provides complete mobility management solutions for Windows 8 and 8.1 tablets, laptops and desktops. Operating systems supported include Windows 8 RT, Core and Pro, and Windows 8.1 RT, Core and Pro.

Enrollment

End users enroll devices through Windows Workplace Join and are authenticated with their corporate credentials. The enrollment process can be custom branded and profiles and apps install automatically upon completion of enrollment.

Security

To secure Windows devices, set advanced passcode requirements and configure restrictions to protect corporate information and maximize data loss prevention.

Profiles

Configure Wi-Fi networks, VPN and certificates to allow seamless, secure access to corporate resources. Install, view and remove certificates remotely. Configure VPN proxy and Wi-Fi proxy, and allow end users to auto-join Wi-Fi networks.

Apps

AirWatch enables complete app management through AirWatch App Catalog. Install recommended internal or web apps and deploy based on the user or group. Users can browse and filter apps by category and add or view app ratings and comments. Support AirWatch apps including AirWatch® Secure Content Locker™ and AirWatch® Browser.

Monitoring

Manage, secure and track Windows devices in your enterprise from a single console. View detailed device data, including network status, certificates installed, app status and more. Reduce the burden on IT and empower employees with the AirWatch self-service portal. From the portal, end users can view detailed device information and perform remote commands.

Management

AirWatch enables remote commands, including sending a message to an end user, clearing a user's passcode, sending a device query and performing an enterprise wipe.
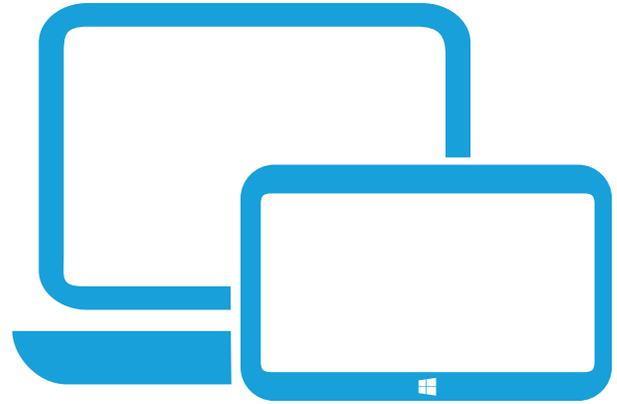

Windows Legacy Management

AirWatch provides complete mobility management solutions for Windows Legacy laptops and desktops. Operating systems supported include Windows XP, Vista and 7. Provision products, enable corporate resources and monitor devices remotely.

Windows Mobile Management

AirWatch provides complete mobility management solutions for Windows Mobile devices. Operating systems supported include Windows CE 5, 6 and 7; Windows Mobile 5.x and 6.1; Windows Mobile 6.5 Professional and Standard; and Windows Embedded 6.5. Ensure device security, manage applications, and remotely manage all Windows Mobile devices.
