

Simplify Higher Education Mobility and Enable a Connected Campus

Mobile technology is transforming the way educational resources are delivered, supported and accessed on university campuses. Students are leveraging mobile devices to access educational material on-the-go, extending traditional course hours and creating a limitless learning environment. Mobile devices are enabling students to access campus applications, course content and university information, promoting collaboration among students and educators and enhancing the educational experience.

AirWatch[®] by VMware[®] provides a comprehensive higher education mobility management platform that enables secure, on-the-go access to educational resources while mitigating security risks to university networks. Manage institutionally-owned, faculty-owned and student-owned devices while protecting device user privacy. Embrace mobility across your university to empower faculty and enhance student learning.

About AirWatch by VMware

AirWatch by VMware is the leader in higher education mobility management, with more than 13,000 global customers. The AirWatch platform includes industry-leading mobile device, email, application, content and browser management solutions. Acquired by VMware in February 2014, AirWatch is based in Atlanta and can be found online at www.air-watch.com.

How We Are Different

- Manage university device fleet across multiple types and operating systems from a single console
- Enable disparate departments to self-manage device deployments with role-based access controls
- Leverage multitenancy to manage devices across university hierarchy of departments and schools
- Protect intellectual property and research with enterprise-grade security and data loss prevention (DLP)
- Extend traditional student and faculty services through mobile applications
- Securely distribute educational content and promote collaboration with AirWatch[®] Secure Content Locker[®]
- Integrate with existing university infrastructure to maximize IT investments and consider budget constraints
- Deploy in the cloud or on premise to meet university infrastructure requirements
