

Enhance the Delivery of Legal Services with Mobility

Today's legal professionals rely on mobile devices to improve productivity, enable collaboration and access corporate resources. Constantly on the move, employees are accessing sensitive documents, client records and court presentations to manage cases and communicate with clients and colleagues. Left unmanaged, the sensitive data that resides on mobile devices presents a significant security risk to law firms.

AirWatch[®] by VMware[®] provides a leading, comprehensive enterprise mobility management platform that enables law firms to secure and manage devices, applications, content, and email. With AirWatch, design a flexible security approach to manage every device type, operating system and deployment model from a single, web-based admin console. Enable employees with the access they require to create an agile, mobile workforce that enhances the delivery of legal services and improves client relationships.

About AirWatch by VMware

AirWatch[®] by VMware[®] is the leader in enterprise mobility management, with more than 14,000 global customers. The AirWatch platform includes industry-leading mobile device, email, application, content and browser management solutions. Acquired by VMware in February 2014, AirWatch is based in Atlanta and can be found online at www.air-watch.com.

Comprehensive Legal Mobility Management

AirWatch enables law firms to manage mobile devices across all major device types, operating systems and ownership types. Enable IT administrators to manage and maintain visibility of your firm's entire mobile fleet from a single, web-based admin console. Leverage our highly scalable, multitenant architecture that can be customized to your organizational structure, ensuring that management configurations are appropriately defined across departments or global offices. Track mobile assets across your entire firm and enterprise wipe devices that become lost or stolen to ensure firm and client information is not compromised.

Mobile Application Management and Integration with Apple's Volume Purchase Program

Simplify management and distribution of mobile applications that legal professionals require to execute daily tasks from mobile devices. Utilize the AirWatch[®] App Catalog to distribute apps and provide end-users with a central place to view, browse, search and install public, internal, recommended and web applications. Utilize AirWatch integration with the Apple Volume Purchase Program (VPP) for managed distribution and installation of purchased mobile applications in bulk quantities.

Significant Cost Savings by Replacing Paper Processes

Traditional legal practices rely heavily on paper and printing services to engage with clients, courtrooms and other stakeholders. From sensitive client information to proprietary firm data, the monetary obligation of supporting these outdated paper processes becomes substantial. With AirWatch[®] Content Locker, law firms can reduce operating costs and increase bottom lines by adopting paperless work processes and utilizing an enterprise file sync and share solution.

Seamless Content Collaboration Across Global Practices

Document handling and processing is essential for the legal sector, creating the need for a solution that promotes remote document execution while maintaining security. Collaborate on time-sensitive documents across employees, departments and even global offices with AirWatch Content Locker. Enhance remote worker productivity by empowering employees to share, edit and annotate legal documents securely. Utilize patented watermarking capabilities to add an additional layer of security to firm and client documents.

Secure Email Access for Legal Professionals On-The-Go

Ensuring secure, remote email access for employees is mission-critical in order for today's law firms to meet client needs. With AirWatch, integrate seamlessly with existing email infrastructures to offer secure access to corporate email, calendars and contacts through a native email client or AirWatch[®] Inbox, a containerized email solution. Maximize data loss prevention with the ability to disable copy/paste data outside of AirWatch Inbox, prevent email forwarding to blacklisted domains or disable access for noncompliant devices.

Unified Laptop Management

Enable laptop management alongside smartphones and tablets to establish comprehensive enterprise device management. Enroll Mac OS[®] X and Windows[®] laptops quickly, configure and update settings over-the-air, enforce security policies and track all device assets from the central admin console. Ensure endpoint protection by requiring device passcodes and certificates for authentication and by configuring anti-virus and malware software automatically.
