Build Workflows Quickly and Securely

VMware Workspace ONE™ mobile flows™ empower organizations to increase user productivity and satisfaction on mobile by making it easy for developers to surface context-based actions and notifications from other backend systems within our proprietary email client, Workspace ONE Boxer. With minimal development, organizations can build on top of pre-built, out-of-the-box connectors, leverage the out-of-the-box connectors as is, or build custom connectors based on a specific use case. Outlined below are the Workspace ONE mobile flows connector options available today for customers.

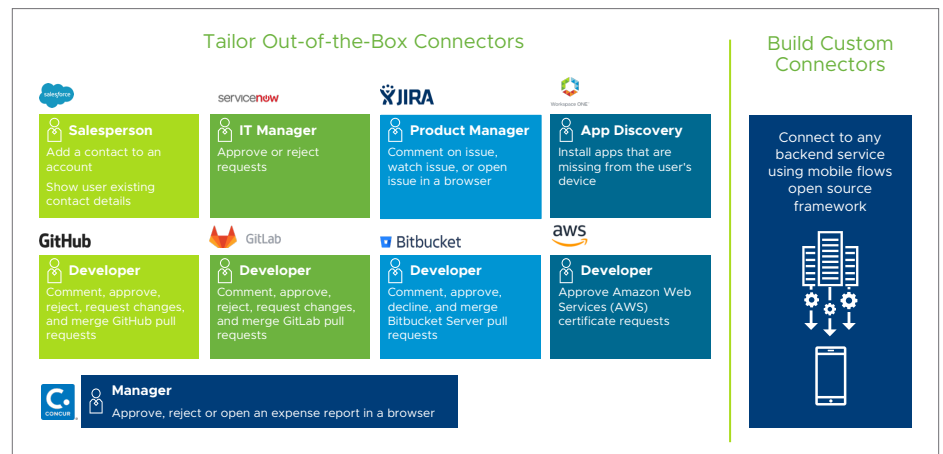

Figure 1

Open-Source Resources and Documentation

Developers can reference the Workspace ONE mobile flows GitHub to view open-source, out-of-the-box connectors. The Workspace ONE Developer Center, part of VMware {code}, is another resource for developers to find source code, tutorials, discussions, and more to get the most out of Workspace ONE and Workspace ONE mobile flows.
