

The Leader in Public Sector Mobility Management

The widespread consumerization of mobile devices has revolutionized the way state and local government agencies operate. In an increasingly mobile world, employee demand and an influx of personal smartphones and tablets are creating a new sense of urgency for government IT.

Enhancing Public Safety

From law enforcement officers updating criminal justice information systems in real-time, to firefighters accessing the location of nearby fire hydrants and water mains via an internal mobile application, mobility within the public safety sector enables agencies to improve missions and increase efficiency.

Improving Field Worker Efficiency

Field and social services workers are embracing mobile applications that collect data, photos and video from the field. Apps save time and eliminate wasteful paper-based collection processes and trips back to the office – enhancing departmental communication, productivity and response.

Engaging with Citizens and the Community

Many agencies are enabling citizens to access important information, such as traffic and road conditions, report problems, perform services at mobile kiosks and securely process payments through mobile technology.

Streamlining Internal Operations

Enable ease of communication across multiple government agencies, departments and committees, improve efficiency and enable employees to telecommute or utilize personal devices to access critical government resources without compromising security.

Key Solutions for Public Sector

Highly Scalable Platform Architecture

The AirWatch[®] Enterprise Mobility Management Platform is designed to meet the deployment complexities, security requirements and mobile growth that government agencies face today and is built to facilitate seamless integration with existing enterprise systems.

Single Management Console

Enroll, configure, view and manage a diverse fleet of Android, Apple iOS, BlackBerry, Mac OS and Windows devices from a single management console.

Unparalleled Multitenancy

AirWatch provides full management capability across all internal subgroupings aligned to your organizational structure – in one administrative console.

Best-in-class Device Security

AirWatch[®] by VMware[®] meets the Defense Information Systems Agency's Field Service Operations division requirements with an approved STIG and ensures your enterprise mobility deployment is secure and confidential information is protected with advanced end-to-end security capabilities extending to users, devices, applications, content, data, email and networks.

Advanced Data Loss Prevention

Block access to email, native browsers, apps and content, prevent copy/paste/print functionality or the opening of files in unauthorized applications, embed a watermark on digital documents, restrict email forwarding and more.

About AirWatch by VMware

AirWatch by VMware is the leader in enterprise mobility management, with a platform including industry-leading mobile device, email, application, content and browser management solutions. Acquired by VMware in February 2014, AirWatch is based in Atlanta and can be found online at www.air-watch.com.

Automated Device Compliance

Automate compliance and take action – from blocking access to enterprise email, apps and resources to wiping a device – when a threat is identified.

Comprehensive App Management

Manage, track and secure internal and public apps through the AirWatch[®] App Catalog. The AirWatch[®] Software Development Kit enables agencies to build internal apps with built-in AirWatch capabilities, while AirWatch[®] App Wrapping adds AirWatch features to existing apps.

Email Security

Integrate with existing email infrastructures and deploy through the native device client or through AirWatch[®] Inbox, a secure containerized email client.

Secure Content Collaboration

Protect sensitive content in an AES 256-bit, FIPS 140-2 encrypted corporate container and provide users with a central application to securely view, edit and share documents, photos and video from their mobile devices with AirWatch[®] Content Locker.

Mobile Browsing Management

Disable native browsers and public browser apps to drive all browsing through AirWatch[®] Browser, whitelist IP addresses for access, define use policies for cookie acceptance and more.
